

# 04-checkpoint-summary

## Day 3 MVP Checkpoint Summary

### Checkpoint Requirement

The organizers asked for a rough but functional toy version with:

- Product brief
- One-page investor pitch
- MVP screenshots
- User flow diagram
- Basic user flow and screens working

### Current Status

WorkTape has a working local MVP flow:

1. User opens the WorkTape app.
2. User uploads or selects a screen recording.
3. Backend extracts video frames.
4. OpenAI vision analysis can return a structured workflow spec.
5. UI shows extracted workflow, detected fields, and clarifying questions.
6. WorkTape creates a final app spec.
7. UI shows how spec fields/statuses/templates map to the generated app.
8. User opens and uses the generated admissions CRM.

### Verification

Latest local verification:

- `npm run typecheck` passed.

- `npm run lint` passed.
- `npm run build` passed.
- Local app returned `200 text/html`.
- Live backend test using `admissions-workflow-test.mp4` returned:
  - `mode=live-ai`
  - 3 frames
  - 4 workflow steps
  - 1 entity
  - 9 fields
  - confidence 0.92

## What Is Real

- Next.js frontend.
- Next.js API backend.
- ffmpeg frame extraction.
- OpenAI Responses API workflow analysis path.
- Structured workflow JSON.
- Clarifying question merge.
- Spec-driven generated CRM UI.
- Working lead form, table, statuses, message templates, copy buttons, and CSV export.

## What Is Fallback

The saved sample path is used for deterministic demo reliability. It is labeled as a fallback and does not pretend to be live AI analysis.

## Out Of Scope For Wednesday

- WhatsApp API integration.
- Production authentication.
- Public deployment.
- Arbitrary workflow support.
- Runtime Codex SDK integration.

## Screenshot Evidence

Screenshots are in the screenshots/ folder:

- 01-upload.png
- 02-extracted-workflow.png
- 03-spec-mapping.png
- 04-generated-tool.png

## Recommended Submission Framing

This is a toy version, but the core loop is visible and functional:

Screen recording -> workflow extraction -> app spec -> generated internal tool.
